Upon inspection via the Firefox Inspect Element tool, there was only one element which did not meet the WCAG standards for accessible text contrast. The element in question was a hyperlinked text with an orange color of hex code #e85c16 on a grey background of hex code #383838. This hyperlink color was was thus changed to a different shade of orange, #f26b27, which represents the official "ONU Orange" color as defined in the Ohio Northern University Branding Guidelines. [1]

The rest of the webpage originally followed the format of a a grey (#383838) background with "white" text as defined by HTML standards (#FFFFFF), with the exception of "h2" headings which had a background of orange (#e85c16) with "black" text as defined by HTML standards (#000000). This basic scheme was retained for Assignment 2, however the orange h2 backgrounds were changed to the "ONU Orange" (#f26b27) color, to match the changed hyperlink text, and all HTML "black" colors were changed to the official "ONU black" color (#333132) as defined in the Ohio Northern University Branding Guidelines.
